Your summary should include:
1. the mode of inheritance
2. information pertaining to people or groups of the population who are at high risk
3. prevalence in the population
4. information about mutations or alleles involved
5. treatments

Grading:
Summary must be well written, edited (no typos, good sentence structure, etc), and concise (1 page max, minimum font 11 point with 1 inch margins, single or double spaced). All sources used for information must be cited in a manner that allows the reader to find the referenced material.

20 points: a good coherent description of 1-5. Well written.

15 points: less well edited, discusses 1-5.

10 points or less: poorly edited, poorly written, lacks required information
